

Play, Pause, Rewind

The Era of Archived Lifetimes

Dr Cathal Gurrin

(Insight Centre for Data Analytics, Dublin City University)

Lifelogger - Researcher - Educator

@cathal - cathal@gmail.com

What if you never had to forget anything again?

In the era of archived lifetimes you will be able to summon up any memory or life experience...

Change the way we work and learn, improve our health, change relationships...

It will change what it means to be human, and it is happening now. In fact, it is inevitable...

Agenda

Pervasive Computing

The Phone as a Sensor

Archived Lifetimes

Oral Communication

Omnipresent Access - General Computing Devices

The iPhone 5 is 60,000 times more powerful than the computer that guided the Apollo 11 astronauts to the moon.

Increasingly
Powerful

Increasingly Low Cost and more Powerful

€35 tablets; big disks, ubiquitous computing

So we enter an era of
pervasive computing.

Is this for real?

- Wearable Computing
- New in 2012
- Novel in 2013
- Promising in 2014
- Mainstream in 2015

Google

SONY

We don't see mobile devices as access devices.

We see them as sensors.

Agenda

Pervasive Computing

The Phone as a Sensor

Archived Lifetimes

Pervasive Computing Today

Google Glass

Omnipresent sensors, that enable a whole new era of services that understand the individual

Understanding The User Context

SIMPLE CONTEXT UNDERSTAND USER HEALTH

DEEP CONTEXT

UNDERSTAND WHAT THE USER SEES

```

Enabling new services that know:

where the user is,
what the user is doing,
who is there,
etc..

These 2014 mobile devices can know more about us
than we know ourselves

NEW SERVICES UNDERSTAND THE USER ENVIRONMENT

So.. why not flick the ‘store switch’?

Beginning a whole new era of personal computing...

Agenda

Pervasive Computing

The Phone as a Sensor

Archived Lifetimes

Archived Lifetimes

Using mobile devices and information devices to **automatically** record everything you see, hear, learn and experience. Creates a **complete and accurate record of an individual** - a Lifelog.

First generation devices are on the market now and people have begun to do this.

Lifelogging enables the concept of a **surrogate memory**. A private digital archive that sees what you see, hears what you hear, 'knows you' and is always available to help you.

Lifelogging has been around for decades.

In 2014, lifelogging can generate thousands of images per day, hours of audio and tens of thousands of data and sensor readings per day.

Images, audio, locations, movements, temperature, heartbeats, interactions, communications, information, activities...

Enabling the ‘Internet of Me’

New Opportunities

- **Health** - personalised health, new tailored treatments
- **Productivity** - greater understanding of self, enhanced knowledge access, enhanced productivity
- **Personal** - never forget anything
- **Security** - your own security data, self-protection (sousveillance)
- **Societal** - more productive and healthy population, a better understood population
- ... and many more ...

EXTERNAL MEMORY

NEVER FORGET AGAIN / ALZHEIMER'S SUPPORT

UNDERSTANDING A CITY POPULATION-WIDE ANALYTICS

EXTERNALISING MEMORY

SEARCH YOUR PAST EXPERIENCES

FRIEND SEARCH

SEARCH YOUR PAST EXPERIENCES

Archived lives will create a whole new set of opportunities & challenges for industry and society.

A new Google for archived lives, but;

Huge data **storage** challenges

Data **security** with huge consequences

Privacy of the lifelogger and bystanders

Privacy

Privacy and reputation of the lifelogger and the subjects/bystanders.

In Summary

Mobile devices become context-aware pervasive computing devices

Throw the ‘store switch’ .. begin the era of lifelogging and surrogate memories

New challenges and opportunities

Then consider the impact of implantable devices

THANK YOU
